

F24 Fig. 8 topology only — qpsim-native numerical curves
 Drive levels borrowed from the Fig. 5 caption; Fig. 8 inset values are unverified

qpsim-native (axes converted to paper convention)
 $\rho_F = 1.74 \times 10^4 / (\mu eV \cdot \mu m^3)$, $T_c = 1.243$ K; paper analytic overlay not implemented
 CSV omits f(E): persisted certificate stamps are producer claims
